PAINTED FINISH CONSIDERATIONS OF MCM IN TODAY'S ARCHITECTURE

*A technically oriented discussion
of today's metal composite material and painted finishes*

Course Specifics

Length: 60 minutes

Learning Credit Units: AIA 1.0

This course is HSW approved & ASID/IIDA 0.1 credit available

Course Overview

This presentation will cover a wide range of timely topics important to the Architect, Designer and Specifier of contemporary interior and exterior metal panels. It will provide an overview of aluminum and metal composite materials, finish options, details of paint and resin systems, application methods as well as weatherability and durability tests.

Learning Objectives

Upon completion of this course, participants should be able to:

- Realize the durability of each of the paint systems and how a more durable finish can contribute to a lower long-term cost
- Interpret paint finish warranties and the need to carefully review the promised performance criteria
- Classify the types of coatings currently available for aluminum architectural panels
- Recognize how the selection of a particular finish can impact the environment
